# Installation Steps

**Step 1:** Make a level line at the top of desired location (Use a laser, level or string for accuracy)

**Step 2:** Screw InstallStrips on each wall stud

**Step 3:** Place storeWALL panels on the InstallStrips

Watch our simple installation:

With storeWALL's patented InstallStrip, one person can easily install the wall system on virtually any surface. Installations have superior strength from added contact points and are cost effective. You can add or change panels at any time. InstallStrip installations have no visible screws or fasteners resulting in a handsome, versatile storage system.

**Break Points**

The InstallStrip comes in three sections that can be separated by snapping at the desired break point.

**Versatile Installation**

Can be mounted to any wall surface: drywall, wood, metal studs & concrete.

**Slotted Panel Grips**

Behind each panel slat is a slotted grip to provide maximum strength for storeWALL's panels

**Gripper Teeth**

The teeth on each InstallStrip grab the panel to prevent wall movement.

**Increased Load Capacity**

The Gripper Teeth add contact points to the wall system to increase the wall load capacity and help redistribute the weight evenly.

Patented backside slotted profile enabling the use of InstallStrips for quick and easy installation
